# TMG3200-STM1 1+1

VoIP Gateway

The TelcoBridges *Tmedia* 1+1 solutions answer service providers' needs for high availability and redundancy. Our *Tmedia* 1+1 solutions consist of three components:

- A standard *Tmedia* Unit
- A *Tmedia* +1 Unit
- And a *Tmedia* 1+1 patch panel

When properly installed and configured, the standard *Tmedia* unit acts as the primary (active) VoIP gateway and the *Tmedia* +1 unit acts as the secondary (standby). The two devices communicate with each other via the ETH ports and in the event of product malfunction; traffic is transferred from the active to the standby unit through the patch panel connection, without the need for human intervention.

*Tmedia* 1+1 solutions ensure redundancy in terms of: power redundancy, packet network redundancy and facility protection.

The *Tmedia* TMG3200-STM1+1 provides a highly available and redundant telecommunications system with the capacity of one STM1.
