→ Power

C) Verify Power LED = Solid Green (Refer to Panel 3)

7

A. Connect to the Linux host through management Ethernet OR serial connector. The IP address of the management port is assigned through DHCP. If DHCP is not available, use the serial cable to connect to the TMG Linux Host for the first time.

B. Default HOSTNAME is the Linux Host serial number, which can be found in the packing slip.

C. Default username and password are "root":"root" to log onto the Linux OS. Navigate to: HTTP://HOSTNAME:12358, to configure the TMG3201.

Next Steps? Refer to the TMG3200 documentation set for information on configuring and administering your TMG3201.
