# Chapter 1 Introduction

This chapter provides an introduction to the installation and setup of a Tmedia system using the TMG5800.

The following topics are covered:

- Installation overview
- Installation prerequisites
- Other recommended reading

## 1.1 Installation Overview

The installation and setup of a TMG5800 unit, as shown in figure 1.1 on page 2, is described by a series of chapters dealing with installation tasks in the following order:

- Rack mounting the TMG5800
- Connecting to the Tmedia Management Interfaces
- Connecting to the VoIP network
- Connecting to the PSTN
- Powering Up
- Initial System Configuration
- System Upgrades
- Troubleshooting

Figure 1.1 TMG5800, seen from front and rear.

---

## 1.2 Installation Prerequisites

For the TMG5800 system installation to proceed without interruption, it is important that you verify that you have on hand all of the necessary materials. Prior to beginning the installation, you should have prepared for the following:

- Adequate space for the installation of your TMG5800. Consider that you will need to mount the TMG5800 on a 19" customer-provided equipment rack.
- Adequate power supply and power connections. To guarantee an uninterrupted supply, the TMG5800 must be powered by one (ideally two) independent dedicated power source(s). Only TMG5800s with a DC-power option are supplied with power cords; therefore, you will need to plan for your AC power cable requirements.
- To run your telecom applications on the TMG5800, you will need to have purchased an adequate number of licenses for the features that you will use.

## 1.3 Preventing Electrostatic Discharge Damage

Electrostatic discharge (ESD) can damage equipment and impair electrical circuitry. It may occur if electronic printed circuit cards are improperly handled and may cause complete or intermittent failure.

---

**Attention** Always follow ESD prevention procedures when removing and replacing modules:

- Ensure that the TelcoBridges TMG5800 is electrically connected to earth ground.
  - Wear an ESD-preventive wrist strap and ensure that it makes good contact with your skin. Connect the wrist strap clip to an unpainted surface of the TMG5800 or the grounded equipment rack in order to channel away all ESD voltage safely to ground. To guard against ESD damage and shocks, the wrist strap and cord must be in proper working condition.
  - If no wrist strap is available, and you must work with the TMG5800, ground yourself by touching a metal part of the chassis.
-

## 1.4 Recommended Reading

This document assumes that you are well versed in the installation of the TelcoBridges TMG5800 and have been trained to work with the equipment. If you have any technical questions, please contact TelcoBridges technical support or send an E-mail to [support@telcobridges.com](mailto:support@telcobridges.com).

Other documents exploring various aspects of the Tmedia system are available on the TelcoBridges TB Wiki at: [http://docs.telcobridges.com/mediawiki/index.php/Main\\_Page](http://docs.telcobridges.com/mediawiki/index.php/Main_Page)

# Chapter 2      Equipment Connections

This chapter provides the connection procedures for the TMG5800 as follows:

- Rack mounting the TMG5800
- Connecting to the Tmedia management interfaces
- Connecting to a PSTN Network
- Connecting to an IP network
- Connecting Power
- Verifying LED Status

## 2.1 Package Contents

You will have received one TMG5800. The TMG5800 is the telecom platform on which you will run your telecom applications.

### 2.1.1 TMG5800 Package Contents

In the TMG5800 box, you will find:

- One TMG5800
- One set of mounting brackets with screws. These are used for the mounting of a TMG5800 on a 19" rack.
- SCSI cables and patch panels. This is optional and only provided if the PSTN interface on your TMG5800 features SCSI connectors.
- Three CAT5 Ethernet straight cables (male-male), three meters in length.
- One warranty sheet
- One packing slip
- One TMG5800 Quick Installation guide (a 1-page sheet that provides a pictorial view of equipment setup).
- For DC units, two DC power cables are provided.

Not included with the TMG5800:

- No power cords are supplied for the AC units. Power cables are shipped with DC units only.
- A 19" equipment rack. You will use a standard 19" wide equipment rack to install the TMG5800.

## 2.2 Rack mounting the TMG5800

The TMG5800 is mounted on a customer provided equipment rack using the mounting hardware packaged in the box.

### 2.2.1 Prerequisites

To rack mount the TMG5800, you will need:

- One 19" customer provided equipment racks. The rack must be solidly anchored to the floor with appropriate support at the top of the racks.
- Climate controlled room: 0 to +50 Celsius, 0 to 95% non-condensing humidity.

### 2.2.2 Vertical Placement of TMG5800

The TMG5800s are housed in 2U chassis, as tabulated in table 2.1 on page 7. It is important that you provide for enough room on the equipment rack to allow for the installation of the TMG5800. Consider the available space on your equipment rack and the height of the TMG5800. Due to the rear-exhaust heat vents and the efficient heat dissipation design, there is no need to leave any physical vertical space above or below the placement of the TMG5800 on the equipment rack.

Table 2.1 TMG5800 Physical Height

Tmedia Model Number	Vertical Height
TMG5800	2U
Patch Panels	1U

## 2.2.3 Mounting the TMG5800

The TMG5800 is mounted on the 19" equipment rack using the angle brackets and screws provided in the box. To mount the hardware, proceed as follows:

**To mount the TMG5800 proceed as follows:**

1. Using two metal screws, attach one angle bracket to the front, left-hand side of the TMG5800 when viewed from the front, as shown in figure 2.1 on page 8. Repeat the same for the angle bracket on the right-hand side.
2. Start mounting equipment at the top-most position of the rack, keeping in mind the space required on the equipment rack as described in Section 2.2.2 "Vertical Placement of TMG5800" on page 7.

Figure 2.1 Mounting the TMG5800

## 2.3 Connecting to the Tmedia Management Interface

The Tmedia Management Interface enables administrators to perform management tasks on the TMG5800.

### 2.3.1 Prerequisites

To communicate with the Tmedia Management Interface for a TMG5800, the following is needed:

- One CAT5 Ethernet cable with RJ45 male-male terminations.

### 2.3.2 Interconnections

The TMG5800 provides a Tmedia Management Interface, using one Gigabit Ethernet network link, as shown in figure 2.2 on page 9.

**To communicate with the Tmedia Management Interface:**

1. Connect the supplied CAT5 Ethernet cable to one of the upper ethernet ports located at the rear of the TMG5800, and shown in figure 2.2 on page 9.

Figure 2.2 Tmedia Management Interface

## 2.4 Connecting to the VoIP Network

The TMG5800 features dual 100 Mbps/1000 Mbps ports for connection to different VoIP networks. Should one of the IP networks fail, the TMG5800 will continue to handle VoIP traffic using the alternate network.

---

**Note:** **Certain configurations of the TMG5800 will exceed 100 Mbps, therefore 1000 Mbps is recommended.**

---

### 2.4.1 Prerequisites

To connect the TMG5800 to the VoIP network, you will need:

- Gigabit Ethernet switch. A second one is required to support redundancy of the VoIP interface.
- One CAT5 Ethernet cable with RJ45 male-male terminations for each TMG5800.
- If your system has access to a second VoIP network, you can connect it to a second VoIP interface of the TMG5800 with an RJ45 (male-male) CAT5 Ethernet cable.

### 2.4.2 Interconnections

The TMG5800 is connected to the VoIP network by one or optionally two Ethernet GigE network links, as shown in figure 2.3 on page 11.

**To connect the TMG5800 to the VoIP network:**

1. Connect a CAT5 Ethernet cable to VoIP1 at the rear of the TMG5800. Connect the other end of the same CAT5 cable to the Gigabit Ethernet switch.
2. If your system employs a second Gigabit Ethernet switch for redundancy, connect a second CAT5 Ethernet cable to VoIP2 at the rear of the TMG5800. Connect the other end of the same CAT5 cable to the second Gigabit Ethernet switch.

Figure 2.3 Connecting to the VoIP Network

## 2.5 Connecting to the PSTN

The TMG5800 features a variety of interfaces to the PSTN network. Each TMG5800 that makes connection with the PSTN will feature a PSTN interface.

### 2.5.1 Prerequisites

To connect the TMG5800 to the PSTN network, you must comply with one of the following:

- Your TMG5800 features 16 modular 8-conductor RJ48 type jacks for connection to T1/E1/J1 lines. You will need one cable for each (T1/E1/J1) interface on the TMG5800. If you are making your own cables, refer to figure 2.5 on page 14 for crossover or straight cable wiring connections.
- Your TMG5800 features SCSI connectors for connection to T1/E1/J1 lines. You will require one patch panel for each 32 line grouping of T1/E1/J1 line interfaces on the TMG5800.
- Your TMG5800 features BNC connectors for connection to DS3 lines. You will require two coaxial cables for each DS3 interface.
- Your TMG5800 features electrical or optical STM 1 connectors. You will require two fibre optic cables for the STM 1 interface of the TMG5800.

## 2.5.2 RJ48 Type Interface (T1/E1/J1)

A TMG5800 with 16 RJ48 type ports enables the connection to T1/E1/J1 lines. The termination impedance is set at 100 ohms for T1 lines and 120 ohms for E1 lines. It is possible to connect an external balun in order to convert to 75 ohms. See figure 2.4 on page 13. If you are making your own cables, refer to figure 2.5 on page 14 for crossover or straight cable wiring connections.

---

**Note** All ports may not be active. T1/E1/J1 ports are activated by software license; the number of active ports depends on the licenses purchased.

---

**To connect the TMG5800 (RJ48 type) to the PSTN:**

1. Start with port 1 located at the top and left-most position. Connect one cable between this port and the T1/E1/J1 line (figure 2.4 on page 13).
2. Repeat step 1, using the next available port.

Figure 2.4 16-Port Interface to the PSTN

**RJ 48 (T1/E1/J1) Wiring Schematic: Crossover Cable**

**RJ 48 (T1/E1/J1) Wiring Schematic: Straight Cable**

Figure 2.5 RJ48 Wiring Schematic

---

### 2.5.3 SCSI Interface (T1/E1/J1)

A TMG5800 with 4 SCSI connectors enables the connection to T1/E1/J1 lines. The termination impedance is set at 120 ohms. It is possible to connect an external balun in order to convert to 75 ohms. See figure 2.6 on page 16

---

**Note** All ports may not be active. T1/E1/J1 ports are activated by software license; the number of active ports depends on the licenses purchased.

---

**To connect the TMG5800 (SCSI) to the PSTN:**

1. Start with the SCSI ports 1-16 located at the bottom right as shown in figure 2.6 on page 16. Connect one SCSI cable between this port and SCSI patch panel number 1, ports 1-16. Connect SCSI ports 17-32 to patch panel number 1, ports 17-32.
2. Repeat step 1, using lines 33-64 and a second patch panel. Connect lines 33-48 to patch panel 2, port 1-16. Connect lines 49-64 to patch panel 2, ports 17-32.

Figure 2.6 SCSI Interface to the PSTN

## 2.5.4 Dual BNC Interface (DS3)

A TMG5800 with 3 sets of BNC connectors enables the connection to DS3 lines. See figure 2.7 on page 17

**Note** All ports may not be active. DS3 ports are activated by software license; the number of active ports depends on the licenses purchased.

### To connect the TMG5800 (DS3) to the PSTN:

1. Start with the Dual BNC port pair #1 (right-most) as shown in figure 2.7 on page 17. Connect one pair of BNC cables between this port and the DS3 line.
2. Repeat step 1, using the next available pair of BNC PSTN interface ports.

Figure 2.7

DS3 Interface to the PSTN

## 2.5.5 Optical Interface (OC3/STM-1)

A TMG5800, with one main and one backup OC3 or STM-1 port enables connection to OC3/STM-1 lines. See figure 2.8 on page 18. Refer to table 2.2 on page 18 for a listing of optical interfaces. The default OC3/STM-1 connection is SMF, intermediate reach, (SFP-OC3-IR1) 1310 nm with LC type connectors.

**Note** Please make certain that the correct model is selected at the time of ordering. If your installation requires a different model from the one that has been provided, you must replace it.

### Automatic Protection Switching

The APS port is used for OC3/STM-1 redundancy. Switchover occurs automatically based on configurable parameters. It is recommended that APS be used if the installation provides this feature.

#### To connect the TMG5800 (Optical Interface) to the PSTN:

1. Connect a fiber optic cable between the Main port and OC3/STM-1 line, as shown in figure 2.8 on page 18.
2. Connect a fiber optic cable between the APS port and OC3/STM-1 line.

Figure 2.8 Optical Interface to the PSTN

Table 2.2 Optical Interfaces

Transceiver Model	Description	Spec	Mode	Type	Range (Km.)	Wavelength (NM)	Connection
SFP-OC3-IR1	OC3/STM1	Hot Pluggable	Single-mode	Intermediate reach	15	1310	LC
SFP-STM1E	STM1E (Electrical)	Hot Pluggable	75 ohms Cooper	Max 180m	<sup>a</sup>	NA	DIN (mini-coax)

a. Variable range

## 2.6 Powering Up

The TMG5800 is furnished with two AC or DC power connections. Only once all other equipment installation work has been completed should the TMG5800 be powered up.

### 2.6.1 Prerequisites

To power the TMG5800, you will need:

- A power source (ideally 2 independent power sources).
- Two power cables.

### 2.6.2 Connecting to AC Power

The TMG5800 is furnished with two AC power connectors.

**To connect the TMG5800 to AC Power:**

1. Connect the first AC power cable between the AC connector of the TMG5800 and an AC supply. Connect the second AC power cable between the AC connector of the TMG5800 and a second AC supply source. See figure 2.10 on page 20.

Figure 2.9

Power Button

Figure 2.10 AC Power Connection

### 2.6.3 Connecting to DC Power

The TMG5800 DC models are furnished with two DC power connection ports. In addition, each DC powered TMG5800 is supplied with a pair of DC power cables. The connection of DC power is described for the TMG5800.

**To connect the TMG5800 to DC power:**

1. Connect the DC cable supplied with the TMG5800, as shown in figure 2.11 on page 21, to the DC outlet at the rear of the TMG5800.
2. Connect one lead of the DC power cable to the positive terminal of the DC power source, as shown in figure 2.11 on page 21.
3. Connect the other lead of the DC power cable to the negative side of the DC power source.
4. Repeat steps 1-3 for the second power DC power source.

Figure 2.11 TMG5800 DC wiring diagram

**Note** Refer to [http://docs.telcobridges.com/mediawiki/index.php/DC\\_cable\\_pinout](http://docs.telcobridges.com/mediawiki/index.php/DC_cable_pinout) for DC cabling information.

## 2.6.4 Verifying the LED Status Indications

When the TMG5800 has been powered, verify the front panel of the unit to determine that all indications are normal. Once the TMG5800 has run successfully through its system boot procedures, the following will be displayed in an alternating fashion as described in table 2.3 on page 22:

Table 2.3 TMG5800 Displays

Display Order	Display
First Screen	IP 0: <ip address of eth0. E.g. 192.168.0.2>  IP 1: <ip address of eth1 E.g. 192.168.0.3>
Second Screen	<board type.. eg. TMP-STM1, TMS-16, TMP-DS3, TMP-16, TMP-32, TMP-64>  <adapter name e.g. TB002821>  <serial number e.g. TB002821>  <release used e.g V2.2.0 RC1>

Figure 2.12 Front display and LEDs

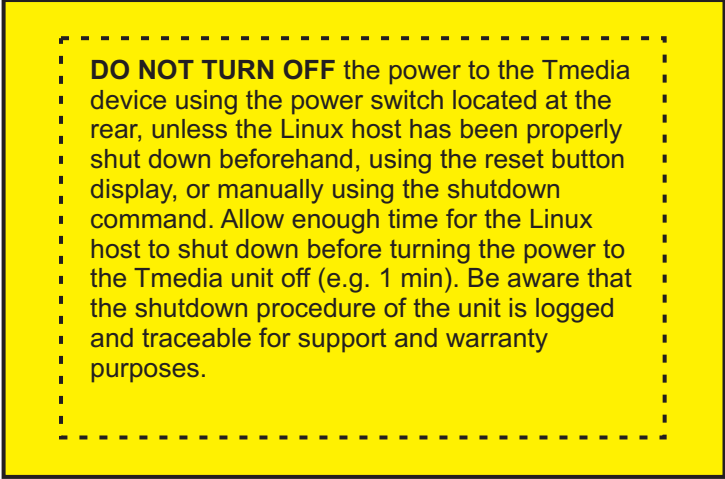

The TMG5800 will perform a software shutdown, if the power button, see figure 2.12 on page 22, is pressed for 1 second (highly recommended).

**Note** The TMG5800 will take about 1.5 minutes to do a software shutdown and there will be indication that the TMG5800 is shutting down (The LED and display will not change).  
The TMG5800 will perform a hardware shutdown, if the power button is pressed and held for 10 seconds.

## 2.7 Powering Down

Powering down the TMG5800 requires that the Linux embedded host be shut down. In order to do this, you must connect to the management interface using SSH, and enter:

```
shutdown -h now
```

**DO NOT TURN OFF** the power to the Tmedia device using the power switch located at the rear, unless the Linux host has been properly shut down beforehand, using the reset button display, or manually using the shutdown command. Allow enough time for the Linux host to shut down before turning the power to the Tmedia unit off (e.g. 1 min). Be aware that the shutdown procedure of the unit is logged and traceable for support and warranty purposes.

**Note** As an alternate method to this procedure, refer to Section 2.6.4 “Verifying the LED Status Indications” on page 22, to power down the TMG5800 with the reset button.

# Chapter 3 Initial System Configuration

This chapter provides the initial procedures that are required in order for you to be able to configure your TMG5800.

The following topics are covered:

- Configuring the TMG5800
- Setting the Time Zone
- Configuring the Toolpack System Using the Web Portal
- Changing TMG5800 Host IP Address
- Changing VoIP IP Interface Addresses
- Changing passwords

For information about Tblinux, a TelcoBridges™ Linux distribution running on the embedded host of the TMG5800, refer to the Telcobridges TB Wiki at:

<http://docs.telcobridges.com/mediawiki/index.php/Tblinux>

## 3.1 Configuring the TMG5800

The TMG5800 comes with the Toolpack and Media Gateway applications pre-installed. In order to make changes to system configuration, you must connect the top-left port (Eth0) at the back of the TMG5800 to a terminal.

The IP address of the TMG5800 is assigned automatically through DHCP, however, default configurations can be changed manually.

The default hostname is the serial number of the embedded host. This can be found on the packing slip along the “TM-CPU-HOST” item.

Connect directly to the TMG5800 or to the RS232 port. See Section 5.1 “Connecting to the Serial Port of the TMG5800” on page 32. Default login information is root/root. Type the command “hostname” or “ifconfig -a”:

```
[root@TB003540 ~]# hostname
```

```
TB003540
```

```
[root@TB003540 ~]# ifconfig -a
```

```
eth0 Link encap:Ethernet HWaddr 00:0C:38:00:0C:39
```

```
inet addr:10.0.0.236 Bcast:10.0.1.255 Mask:255.255.254.0
```

```
inet6 addr: fe80::20c:38ff:fe00:c39/64 Scope:Link
```

You can connect using the hostname or using the IP address assigned to eth0, using port 12358:

```
http://HOSTNAME:12358
```

```
For example: http://TB003540:12358
```

## 3.2 Setting the Time Zone

The time zone of the TMG5800 is configured on the Linux host using the *tzselect* command. The following is provided as a sample of how to configure a time zone.

```
[root@TB005375 ]# tzselect
Please identify a location so that time zone rules can be set correctly.
Please select a continent
1) Africa
2) Americas
.
.
.
10) None - I want to specify the time zone using the Posix TZ format.
#? 2
Please select a country.
1) Anguilla
.
.
.
10) Canada
.
.
.
51) Virgin Islands (US)
#? 10
Please select one of the time zone regions.
1) Newfoundland Time, including SE Labrador
.
.
.
7) Eastern Time - Quebec - most locations
.
.
.
27) Pacific Time - north Yukon
#? 7

The following information has been given:

    Canada
    Eastern Time - Quebec - most locations

Therefore TZ= 'America/Montreal' will be used.
Local time is now: Wed Aug 19 08:49:01 EDT 2009.
Universal time is now: Wed Aug 19 08:49:01 UDT 2009.
Is the above information OK?
1) Yes
2) No
#? 1

You can make this change permanent for yourself by appending the line
    TZ= 'America/Montreal'; export TZ
to the file '.profile' in your home directory; then log out and log in again.

Here is the TZ value again, this time on standard output so that you
can use the /usr/bin/tzselect command in the shell script
America/Montreal
[root@TB005373 ]#
```

## 3.3 Configuring the Toolpack System Using the Web Portal

To change the default configuration of the Toolpack system using the Web Portal, follow the steps described in the Web Portal System Configuration Tutorial Guide. This document can be obtained from TelcoBridges TB Wiki at:

[http://docs.telcobridges.com/mediawiki/index.php/Web\\_Portal\\_Tutorial\\_Guide\\_Versions](http://docs.telcobridges.com/mediawiki/index.php/Web_Portal_Tutorial_Guide_Versions)

The default login information for the Web Portal application is:

- Username: root
- Password: root

## 3.4 Changing the TMG5800 Host IP

A static IP address can be assigned to eth0, instead of using DHCP. To do this connect to the serial port (see Section 2.3 “Connecting to the Tmedia Management Interface” on page 9) and open the eth0 configuration file, using the procedure described in the Telcobridges TB Wiki at:

[http://docs.telcobridges.com/mediawiki/index.php/TBLinux:How\\_to\\_change\\_the\\_ip\\_address](http://docs.telcobridges.com/mediawiki/index.php/TBLinux:How_to_change_the_ip_address)

To return ETH0 or ETH1 to use DHCP, open the appropriate configuration file, using the same procedure described in the Telcobridges TB Wiki at:

[http://docs.telcobridges.com/mediawiki/index.php/TBLinux:How\\_to\\_change\\_the\\_ip\\_address](http://docs.telcobridges.com/mediawiki/index.php/TBLinux:How_to_change_the_ip_address)

## 3.5 Changing VoIP Interface Addresses

The default address of the VoIP interfaces of the TMG5800 can be modified. To learn how this is done, refer to the Toolpack Web Portal tutorial guide on the Telcobridges TB Wiki at:

[http://docs.telcobridges.com/mediawiki/index.php/Web\\_Portal\\_Tutorial\\_Guide\\_Versions](http://docs.telcobridges.com/mediawiki/index.php/Web_Portal_Tutorial_Guide_Versions)

## 3.6 Changing Passwords

Once logged in to the TMG5800, type “passwd”, in order to change the password being used. The following information will be displayed:

```
[root@TB003540 ~]# passwd
Changing password for user root.
New UNIX password:
Retype new UNIX password:
passwd: all authentication tokens updated successfully.
```

# Chapter 4 System Upgrades

For information concerning system upgrades on a Telcobridges TMG5800, refer to the Toolpack Install Guide for TMG5800. This document can be found on the Telcobridges web site:

[http://docs.telcobridges.com/mediawiki/index.php/Upgrading\\_Toolpack'](http://docs.telcobridges.com/mediawiki/index.php/Upgrading_Toolpack)

## 4.1 Installing a New License

In order to install a new license on a Tmedia system, follow the steps described on the following internet page:

[http://docs.telcobridges.com/mediawiki/index.php/Add/Change\\_Licenses](http://docs.telcobridges.com/mediawiki/index.php/Add/Change_Licenses)

---

**Note:** A license upgrade may require that the TMG5800 be restarted.

---

# Chapter 5 Troubleshooting

This chapter provides guidance in what actions to take when encountering system problems prior to contacting TelcoBridges Customer Support.

The following topics are covered:

- Connecting to the serial port of the TMG5800
- Configuring the terminal emulator application
- Reporting a Problem
- Preparing your setup information
- TbDebug Debug Dump Files
- Application Logs
- Backdoor Tools
- tbsigtrace signaling traces
- Hard disk replacement

## 5.1 Connecting to the Serial Port of the TMG5800

To view debug output data for a TMG5800, you must first physically connect your computer port to the serial port of the TMG5800.

**There are two ways to connect to the console of the TMG5800.**

1. A monitor connected to the VGA connector (see Section 5.1 “VGA Port Pinout Description” on page 33), at the rear of the unit. A keyboard and mouse can be connected to the USB ports at the rear, or
2. RS-232 cable at the rear of the unit connected to another computer’s serial port

**Note** If you are connecting to the TMG5800 using the RS-232 port, you will need to set the serial connection parameters. See Section 5.2 “Configuring the Terminal Emulator Application” on page 34.

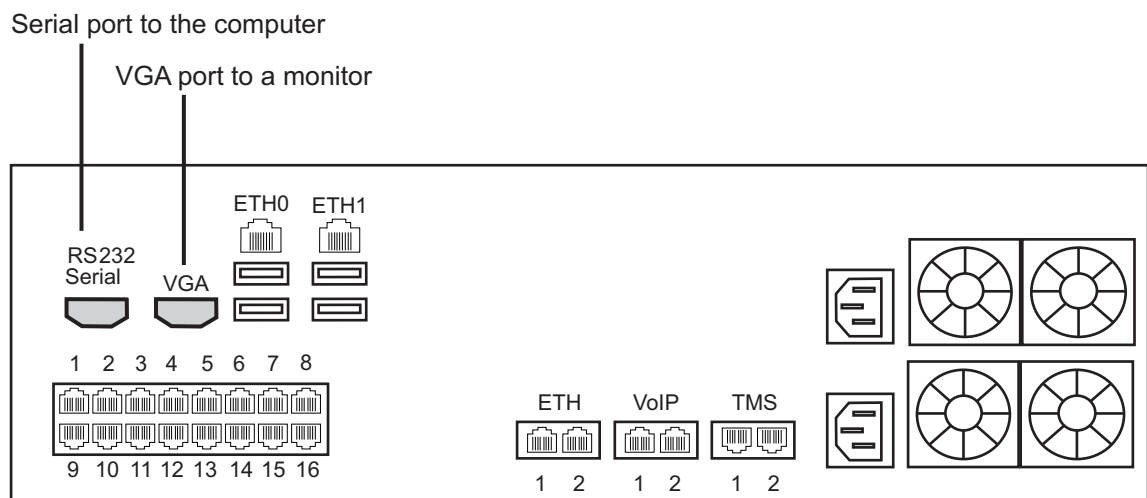

Figure 5.1 Computer to TMG5800 Serial Port Connection

Table 5.1 VGA Port Pinout Description

Pin	Signal Name	Description
1	SPA_DCD	DCD (carrier detect)
2	SPA_SIN_L	RXD (receive data)
3	SPA_SOUT_N	TXD (transmit data)
4	SPA_DTR	DTR (data terminal ready)
5	GND	Ground
6	SPA_DSR	DSR (data set ready)
7	SPA_RTS	RTS (request to send)
8	SPA_CTS	CTS (clear to send)
9	SPA_RI	RI (ring indicate)
10	NC	no connection

## 5.2 Configuring the Terminal Emulator Application

When connecting using the RS232 port of the TMG5800, you must first configure a terminal emulator or console application to communicate with the TMG5800 in order to configure initial settings. Available terminal emulation software includes:

- HyperTerminal
- Putty
- Minicom

**To configure the terminal emulator application:**

1. Set the baud rate (bits per second) to **115200**
2. Set the data rate to **8 bits**
3. Set the parity to **None**
4. Set the stop bits to **1**
5. Set the flow control to **None**

## 5.3 Reporting a Problem

TelcoBridges has developed extensive tools to gather information about a Tmedia system to solve problems quickly. Users **MUST** gather all related logs before reporting a problem to TelcoBridges Support via Email or MSN. Various logging methods are described in the following sections.

Once information is gathered and sent to the TelcoBridges Support group ([support@telcobridges.com](mailto:support@telcobridges.com)), the Support group will assign a tracking number to the problem. All follow-up correspondence, whether it be by E-mail, MSN, or phone call must refer to the tracking number which the problem has been assigned.

## 5.4 Setup Information

The setup information must include:

- Physical connections. If necessary, describe it in a network diagram.
- Specifying that your product is a TMG5800.
- Telecommunication connectivity diagram (for example: E1/T1/J1, DS3, STM-1/OC-3, VoIP Ethernet switch, etc)
- Remote access to system (SSH, VPN, VNC, Remote desktop, etc.)
- For a signaling-related problem, specify which side is initiating the call

## 5.5 Tbdebug Dump Files (Mandatory)

The tbdebug copies information about Telcobridges libraries and TMG5800 into log files. This includes software, the release running on the host, the firmware release running on the TMG5800, and other TMG5800 information, such as: available features, configuration, and status information.

The tbdebug files must be sent when a problem is reported. If the problem is reproducible, the tbdebug dump files are verified before and after the problem is reproduced. This will aid in identifying the problem quickly.

For further information about Tbdebug, refer to Telcobridges TB Wiki at:

[http://docs.telcobridges.com/mediawiki/index.php/Toolpack\\_Debug\\_Application:Tbdebug](http://docs.telcobridges.com/mediawiki/index.php/Toolpack_Debug_Application:Tbdebug)

## 5.6 Application Logs

All Toolpack applications will produce logs. The trace level can be set to vary the amount of logs that are received from the system. Trace level 0 is the most verbose and 4 is the least. Important errors are always logged.

`/lib/tb/toolpack/setup/[SystemId]/[major version]/apps/gateway` (Or customer's application)

```
tblogtrace
tboamapp
tbstreamserver
toolpack_engine
toolpack_sys_manager
/lib/tb/toolpack/
tbtoolpack_service
```

```
/lib/tb/toolpack/pkg/[minor version]/web  
Log  
Database dump:  
mysqldump -u [DbUserName] -password=[DbPassword] -opt toolpack_0 > toolpack_0.sql  
For example: mysqldump -u tbdb -password=tbdbpw -opt toolpack_0 > toolpack_0.sql
```

---

**Note** This can be obtained from the web portal or by using the tbdebug command.

For further information on database backups, refer to

[http://docs.telcobridges.com/mediawiki/index.php/Toolpack\\_v2.5:Database\\_Backup](http://docs.telcobridges.com/mediawiki/index.php/Toolpack_v2.5:Database_Backup)

---

## 5.7 Backdoor Tools

A number of backdoor tools are available as follows:

- tbx\_cli\_tools\_remote
- tbshowls
- VoIP Traffic Capture
- Wireshark
- tbstreamlisten
- Stream server audio packets to wave file
- tbsigtrace

### 5.7.1 tbx\_cli\_tools\_remote

The tbx\_cli\_tools\_remote tool can be used to get the text-based GUI control of TB applications like Toolpack\_Engine, Toolpack\_sys\_manager, tbstreamserver, and others which are run in background.

For further information about tbx\_cli\_tools, refer to Telcobridges TB Wiki at:

[http://docs.telcobridges.com/mediawiki/index.php/Toolpack\\_Application:tbx\\_cli\\_tools\\_remote](http://docs.telcobridges.com/mediawiki/index.php/Toolpack_Application:tbx_cli_tools_remote)

## 5.7.2 Line/Trunk Status (Tbshowls)

```
tbshowls (/tb/bin/release/[OS version]/)
```

tbshowls can be used to show trunk alarm and performance counters. The tool will check the trunk status periodically to show the most updated trunk status. Users can use the up/down/left/right arrow keys to show the performance data on different trunks. Use a-s-d-x to scroll and view other lines services.

Options 'G' and 'S' enable you to get and set the trunk interface parameters.

Option 'R' can be used to reset the performance counter value to zero.

It is also possible to allocate all line interfaces in different configurations. This is useful for DS3 and OC3/STM-1 configurations, in order to help users understand the configuration.

---

**Note** Trunk status and alarms can be viewed from the *Status* menus of the Web Portal.

---

---

**Note** This tool is not supplied with the Toolpack installer but is available in the developer package.

---

## 5.7.3 VoIP Traffic Capture

When troubleshooting VoIP related issues, a direct Ethernet connection can be established between the host's Gigabit Ethernet interface and the VoIP1 interface on the TMG5800. Wireshark is connected on the Gigabit Ethernet interface on the host server.

### To capture VoIP Traffic, do the following:

1. Connect VoIP1 interface to Ethernet port of a server
2. Connect to the telecom platform
  - 2a. Using telnet, for example: [root@TB005375 ]# telnet 172.31.1.1  
or
  - 2b. Using minicom, for example: [root@TB005375 ]# minicom

3. Type this command:

```
mv88eMonitor 0x4 0x4 3 (Copies everything from VoIP0 to VoIP1) *
```

4. Start pcap capture on the server Ethernet port (either wireshark or tcpdump)
5. To stop the tracing:

```
mv88eMonitor 0 0 3
```

## 5.7.4 Wireshark (formerly called Ethereal)

Wireshark is useful for capturing both VoIP traffic as well as Streamserver packets (play/record function).

This program is available at this site: [www.wireshark.org](http://www.wireshark.org)

## 5.7.5 Tbstreamlisten

`tb\apps\tbstreamlisten\release\[OS version]`

This allows the recording of the raw data from a TDM stream. Please ask customer support for instructions regarding this function.

---

**Note** This tool is not supplied with the Toolpack installer but is available in the developer package.

---

## 5.7.6 Stream Server Audio Packets to Wave File

It is possible to capture all audio packets transmitted to and from the Stream Server and to convert them into wave files for analysis. You can use Wireshark or tcpdump on the server running the tbstreamserver application.

The conversion tool, streamserver\_pkt\_to\_wav can be found at the following location:

`/tb/bin/release/[OS version]`.

---

**Note** This tool is not supplied with the Toolpack installer but is available in the developer package.

---

## 5.7.7 tbsigtrace Signaling Traces

The tbsigtrace program is a tool used to capture SS7, ISDN, and SIP signaling.

---

**Note** This application can be started with Toolpack. For further information, refer to the TelcoBridges TB Wiki at:  
[http://docs.telcobridges.com/mediawiki/index.php/Toolpack\\_Debug\\_Application:Tbsigtrace](http://docs.telcobridges.com/mediawiki/index.php/Toolpack_Debug_Application:Tbsigtrace)

---

## 5.8 Hard Disk Replacement

The TMG5800 has two hard drives set up as Raid 1. If a hard drive fails, the system will continue to operate without problem.

It is also possible to replace a failed disk without any interruption to service. To do this, proceed as follows:

1. Press the blue release button to retract the drive.

2. Pull the drive out of the drive slot. Avoid using the small plastic arm.

3. Insert the new drive into the drive slot. Use your thumbs to firmly seat the drive.

4. Clip the plastic arm into place, to firmly secure the drive.

5. Contact TelcoBridges support to enable Raid on the newly installed hard drive.
